- Substations
- 3 Phase Power Lines
- Transmission Lines
- Lakes/Ponds
- Rivers/Streams
- Conserved Land

Wind
 This map shows areas of potential wind energy development. It includes areas with good access to wind resources and also considers other conditions that may limit the feasibility of wind energy development. These limiting factors are referred to as constraints. Areas of prime wind potential exist where the natural conditions make development feasible and no constraints are present.

These maps are designed to initially identify areas and follow-up on-site work is required to verify the areas are feasible for projects. They are subject to revision and are NOT intended to green-light or fast-track projects.

Wind Potential
Suitability, HubHeight

- Prime, 50
- Constraints, 70
- Prime, 1m 3phase
- RAW wind
- Constraints, 50

Known Constraints
 Wetland (Determined and undetermined)
 DEE: River Corridor
 State-designated Natural Communities and Rare, Threatened, and Endangered Species
 Forest Stands
 Wetland (Determined and undetermined)
 Class 1 and Class 2 Wetlands (OTM and advisory layers)

Possible Constraints
 Agricultural Land (US Agriculture Important Soil Units)
 FEMA Special Flood Hazard Areas
 Private Land (Unpublished)
 All 200 Agricultural Subdivision areas
 Deer Wintering Areas
 ANR's Wetland Conservation Design Highest Priority Forest Block Outlets
 Forest Blocks - Conserving
 Forest Blocks - Historic
 Forest Blocks - Physical Land Division
 Historic Sites

TRORC (unusable areas indicated in known constraints)
 Wetland (Determined and undetermined)
 Wetland Areas, including National Wetland Areas
 Class 1 Wetland
